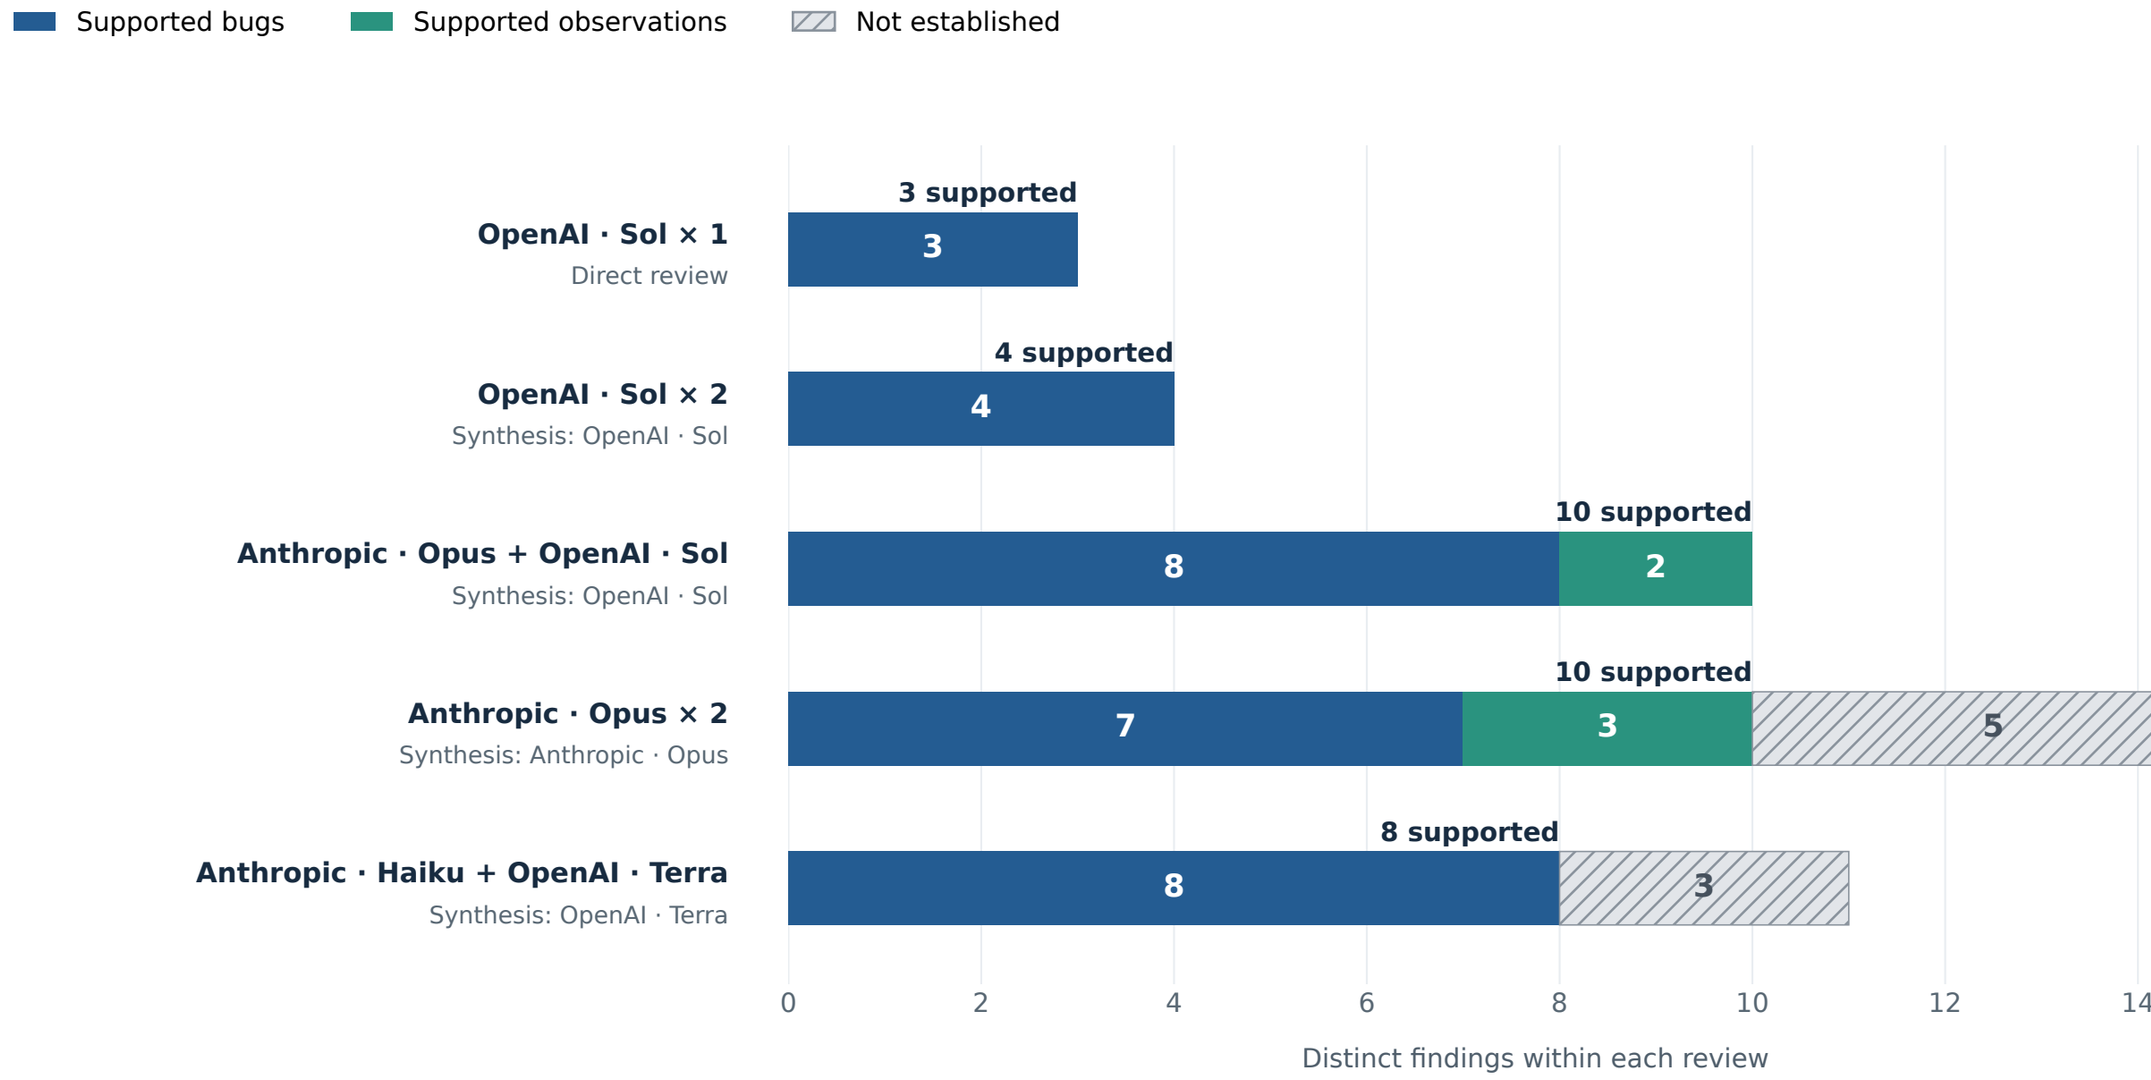
AI code review: useful findings by model setup

One pull request · five configurations · findings independently checked



How to read the categories

Bug	Demonstrated incorrect behavior or a broken intended workflow.
Observation	Supported design or efficiency concern, without an established failure.
Not established	Insufficient evidence, an unmeasured claim, or a refuted finding.

Models: OpenAI GPT-6.1 Sol / Terra via Codex; Anthropic Claude Opus 5.5 / Haiku 5.5. All at high effort.

Same source snapshot and tool revision; one run per setup. Same-model pairs reuse one independent review. Counts overlap across setups.

Synthesis combines and checks reviewer reports. Its model also varies here. This is a small case study, not a general model ranking.
